CS 3651 – Form a Project Team
Due: Tuesday June 4th, before 11:55pm

It's time to choose a final project team and start thinking about the project you will complete. Pick a team member who will complement your abilities and be sure that somebody in your team has the skills (or can learn them quickly!) do each sub-task your project will require. You may also want to consider what you have learned about the work habits of your classmates when choosing teams to ensure you have a smooth final project.

Required Deliverables:

1. Team Introduction Document that includes:

- (75%) Names of the two project team members

- (25%) At least two (or more) brief ideas for what your final project will be (3-5 sentance description each). [If you are already sure of your project idea will be, you can spend 10 sentances on one good idea.].

Turn-In Procedure:

Each team member should turn a PDF or TXT file of the group proposal to t-square. (Each team member must turn in the same file!)
